

Get a dose of simplification with a DOSIS® L60

The DOSIS L60 is the **first viable robot** that meets all your needs; whether it is handling your high moving drugs or supplementing your filling needs for the extemporaneous drugs in your formulary.

The DOSIS L60 is the **only product on the market** that gives you the ability to achieve both pre-pack, and on-demand filling with the same piece of automation.

The L60 **fills, seals and patient labels** the 30/31-day single medication blister cards targeting long term care, institutional, and correctional facilities.

DOSIS is the **only robot with a Calendar Filling option**. The L60 can dispense prescriptions based on a start date. DOSIS reads the start date entered into the Pharmacy Management Information System (PMIS) and dispenses the medication into the correct blister locations so that the pre-printed numbers on the face of the card match the dates for the prescription to be taken.

The L60 offers **maximum value** to you by minimizing the space required to achieve significant prescription throughput rates for all your filling needs.

The DOSIS L60 is **safer and more accurate** allowing you to better serve your customers.

Simple Canisters = Smart Choice

The DOSIS L60 canister's simple design brings a new dimension to dispensing -- inexpensive, no calibration, no additional fees, no sensors, no electronic components, and no air gaskets.

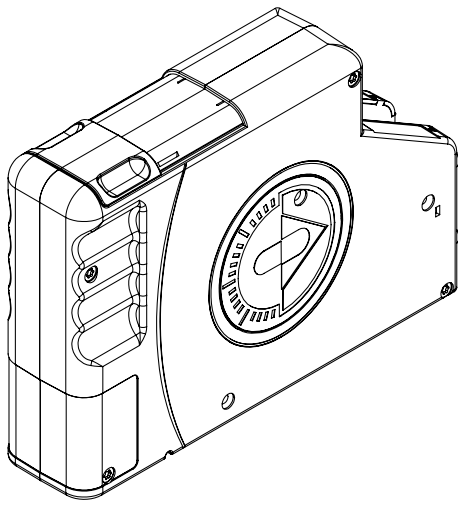

All this makes it the **AFFORDABLE CHOICE** to achieve a greater number of drugs in automation.

DOSIS®

THE POWER OF AUTOMATION.
MADE SIMPLE.

A MANCHAC TECHNOLOGY

MEDICATION CANISTER

- 1000cc Drug Capacity
- One size fits all
- No user adjustments or calibrations
- Generic changeouts -- let your purchasing demands determine what you dispense
- NO manufacturer calibration or exchange fees for new drugs
- Canisters are not tied to any given particular location
- Uniquely serialized canisters
- Easy to add or empty pills from canister

L60 FEATURES

- Only viable fully automated 30/31-day blister card (a.k.a. bingo card) automation.
- Fills, seals and patient labels without user interaction.
- The first 60 drugs will relieve 1/3 of your fulfillment workload.
- Canister based automation. Holds 60 canisters at a time. Utilize as many as you want.
- Expand to multiple units as your demand grows.
- User-friendly browser-based software. Install nothing on your PC.
- Fills **any** quantity needed -- 7/14/21/28 pills.
- Bar code tracked replenishments.
- Install and Train in a single day.
- Machine-Vision-based counting technology (patent pending).
- Connects directly to your Pharmacy Management System's electronic interface.
- Priority prescription filling.

ABOUT US

Manchac Technologies is focused on helping pharmacies keep up with prescription demands, maintain regulatory compliance, and ensure patient safety by developing DOSIS, an automated prescription fulfillment platform. DOSIS is an easy to use, pharmacy friendly product that automates the prescription dispensing process by filling, sealing, and patient labeling into the desired packaging.
