

Multiply Your Filling Power With DOSIS®

For **higher-volume pharmacies**, multiple DOSIS units can be linked as a single, integrated system providing fully automated prescription filling with inherent redundancy and tremendous hourly throughput.

DOSIS fully automates the tedious process of filling, sealing, and patient-labeling blister card prescriptions. Your technicians refill medication canisters and materials then walk away to perform other tasks while the DOSIS system works in the background.

DOSIS®

THE POWER OF AUTOMATION.
MADE SIMPLE.

A MANCHAC TECHNOLOGY

Built-in Reliability and Redundancy

DOSIS's multi-unit deployment is designed to meet your high volume prescription demands with user friendly equipment that you can immediately rely on. DOSIS has the capabilities to grow with your ever-changing staffing and pharmacy needs.

Competitively priced, a DOSIS multi-unit deployment enables your pharmacy to continue filling even if an error halts one of the DOSIS units. This is unlike the competition's single-unit deployment (with comparable throughput) where one failure completely shuts down your automation, leaving your staff unexpectedly having to replace the productivity of the entire system.

If a single machine failure occurs in a multi-DOSIS deployment, it reduces only the overall throughput, but it does not totally eliminate automated prescription dispensing.

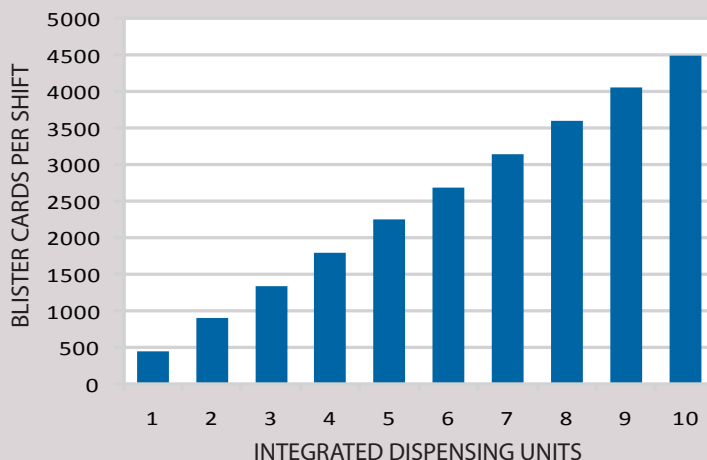

DOSIS is designed for continual use by your pharmacy staff. Diagnostic features built into each system allow our support team to monitor performance remotely and schedule preventive maintenance as needed.

We help enable your pharmacy to focus on delivering quality products and services to the customers removing the worry of manually filling blister cards.

Scalable and Expandable

DOSIS is the only robotic solution that allows you to get the same value and efficiency whether installing one unit or ten. Can't make a large capital purchase now? Start with two units and expand to more units over time without ever taking a backward step.

When multiple DOSIS units are integrated as a single system, they automatically share the workload and assist your staff in keeping optimal performance throughout the workday. Typically, one staff member alone can operate and replenish 8 to 10 DOSIS dispensing units.

Medication Canisters

- Generic change outs -- let your purchasing demands determine what you dispense
- 1000cc Drug Capacity
- No user adjustments or calibrations
- No manufacturer calibration or exchange fees for new drugs
- Canisters are not tied to any given particular location

L60 SPECIFICATIONS

Number of Canisters: Holds 60, Ships With 72

Dimensions: 25" D x 43" W x 79" H

Weight: ~1200 lbs.

Console: 8" Touch Screen

Internal Printer: Direct Thermal Printer

Prescription Labels: 2" x 4" **optional reorder tab*

Blister Card Stock: Cold Seal 30/31-Day Card

Blister Card Capacity: 250 Empty Cards

Browser Type: Firefox 3.0 or Greater

Electrical Plug Type: NEMA 5-20P

Power: 115V, 20 AMP **dedicated circuit required*

Network: 10/100 Fast Ethernet **required*

Internet Access: 115Kbps or Greater **required*
